

Expected Family Contribution (EFC)

The EFC is a measure of how much the student and his or her family can be expected to contribute to the cost of the student's education for the year. The EFC is calculated according to a formula specified in the law. In this chapter, we describe the EFC formula in detail.

GENERAL INFORMATION

All the data the CPS uses to calculate the EFC come from the information the student provides on the FAFSA. The EFC formula incorporates many variables, including income, assets, the number of persons in the household, and the number attending college for the award year.

Every year the Department publishes updated tables used in the EFC calculation. Most of the 05-06 tables are in the June 17, 2004 *Federal Register*; the state tax table is in the December 23 edition.

The law provides three different formulas to calculate the EFC: one for dependent students, one for independent students without dependents other than a spouse, and one for independent students with dependents other than a spouse. In addition there are three simplified versions of each formula with fewer data elements.

SIMPLIFIED FORMULA

The simplified formula is basically the same as the regular formula, except that asset information isn't considered in the calculation. A dependent student qualifies for the simplified calculation if

- neither the student nor his parents were required to file an IRS Form 1040* and
- the parents' combined AGI (for taxfilers) or income earned from work (for nonfilers) was less than \$50,000**.

An independent student qualifies for the simplified calculation if

- neither the student nor spouse was required to file an IRS Form 1040* and
- the student's and spouse's combined AGI (taxfilers) or income earned from work (nonfilers) was less than \$50,000**.

Basic EFC formulas

- ➔ Dependent students
- ➔ Independent students
- ➔ Independent students with dependents

Special calculations

- ➔ Simplified formula (no assets)
- ➔ Automatic zero EFC
- ➔ Other than 9-month enrollment

HEA Sec. 474, 475, 476, 477, 478, 479

* A family member who was not required to file the IRS Form 1040 may have filed the 1040 solely to claim an education tax credit—this does not disqualify the applicant for purposes of the simplified formula or the automatic zero EFC.

** Beginning with the 2004 tax returns, the IRS has changed the income limit for filing a 1040A, 1040EZ, or TeleFile form from \$50,000 to \$100,000. This has no relation to the income limit for qualifying for the simplified formula.

Other tax forms

A foreign tax return counts as an IRS Form 1040 to determine if one qualifies for the simplified formula and the automatic zero EFC. A tax return for Puerto Rico, Guam, American Samoa, the Virgin Islands, Marshall Islands, the Federated States of Micronesia, or Palau counts as an IRS Form 1040A or 1040EZ for the purposes of qualifying for the simplified formula and the automatic zero EFC.

Assets not reported on FAFSA

If the student doesn't provide any asset data and qualifies for the simplified formula, her application will still be processed normally. She will only receive one EFC, which will be produced by the simplified formula. However, if the student doesn't qualify for the simplified formula, her application will be rejected and she will have to submit asset data before the CPS will calculate an EFC.

Automatic zero EFC

Sec. 479(c)

* A family member who was not required to file the IRS Form 1040 may have filed the 1040 solely to claim an education tax credit—this does not disqualify the applicant for purposes of the simplified formula or the automatic zero EFC.

The application asks for asset information from all students. If the student qualifies for the simplified formula and provides the assets, the CPS will make two EFC calculations: one using the assets and one excluding them. The EFC from the simplified formula (which excludes assets) is called the primary EFC and is printed on the front of the student's SAR, while the EFC from the full calculation is called the secondary EFC and is printed in the FAA Information section. To determine the student's aid, the school must use the primary EFC, which will always be less than or equal to the secondary EFC. If it turns out that the student was not eligible for the simplified formula, the school must correct and submit the record and use the EFC reported on the resulting transaction.

AUTOMATIC ZERO EFC

The law also provides for an automatic zero EFC for some students. The CPS will assign a zero EFC to a dependent student if

- neither the parents nor the student was required to file an IRS Form 1040,* and
- the parents' combined AGI (for taxfilers) or combined income earned from work (for nonfilers) is \$15,000 or less.

An independent student with dependents other than a spouse automatically qualifies for a zero EFC if:

- neither the student nor spouse was required to file an IRS Form 1040,* and
- the student's and spouse's combined AGI (for taxfilers) or combined income earned from work (for nonfilers) is \$15,000 or less.

Independent students with no dependents other than a spouse do not qualify for an automatic zero EFC.

ALTERNATE EFCs

The law specifies how the EFC of a dependent student must be modified if the student is going to enroll for other than a nine-month period. The EFC found in the upper-right-hand corner of the first page of the output document is based on a nine-month enrollment period and should always be used for awarding a Pell grant, even if the student is attending for a longer or shorter period. The second section of the "FAA Information" area contains a table of alternate primary and secondary EFCs for periods of one to twelve months. These are alternate EFCs that you must use to award aid if the student is attending for other than nine months.

FORMULA A — DEPENDENT STUDENTS

The EFC for a dependent student is calculated using the FAFSA information for the student and his parents. The CPS calculates a parents' contribution, a student's contribution from income, and a student's contribution from assets; the EFC is the sum of these three. The parents' contribution includes a contribution from assets.

Under the simplified formula the parent's contribution doesn't include assets, nor is the student's contribution from assets counted.

Worksheets and tables that can be used to calculate the EFC for a dependent student are given at the end of this chapter. For those items that are taken from the FAFSA, the worksheets indicate the corresponding FAFSA/SAR line numbers. On the worksheets for the simplified formula, the parts of the calculation that aren't used are grayed out.

Parents' contribution

There are three basic steps in calculating the parents' contribution. First, the parents' available income is determined. Then, the parents' contribution from assets is calculated. Finally, the parents' contribution is calculated using the available income, the contribution from assets, and the number in college.

▼ *Parents' available income.* The parents' available income is calculated by subtracting certain allowances from the parents' total income. These allowances account for certain nondiscretionary expenses, such as taxes and basic living expenses. Once a minimum level of support has been provided for those expenses, the formula assumes that the remaining income is available for discretionary purposes, including paying for a postsecondary education. The available income can be a negative number.

The total income is the sum of the taxable and untaxed income, minus amounts reported in the income but excluded from the formula. If the parents are taxfilers, the parents' AGI as reported on the FAFSA is the amount of the parents' taxable income used in the calculation. If the parents are not taxfilers, the calculation uses the parents' reported income earned from work. Note that "earned income credit" is included as part of total untaxed income and benefits only if the parents are taxfilers (the Department recommends that eligible persons file a tax return and receive the EIC). Total income can be a negative number.

The sum of the following allowances are used to reduce the parents' total income:

- **U.S. income tax paid.** Use the amount reported on the FAFSA. Non-taxfilers don't receive this allowance. If this is a negative amount, it is set to zero.
- **State and other tax allowance.** Use Table A1. This allowance is a percentage of parents' total income and approximates the

Formula for dependent students

- **Parents' contribution**
Parents available income
Parents contribution
from assets
Number in college
- **Student's contribution from income**
- **Student's contribution from assets**

average amount paid in state and other taxes. The percentage varies according to the state and according to whether the parents' total income is below \$15,000 or is \$15,000 or more. The state used is the parents' state of legal residence reported on the FAFSA. If this item is blank or invalid, the student's reported state of legal residence is used. If both are blank or invalid, the state in the student's mailing address is used. If all three are blank or invalid, the rate shown in Table A1 for a blank or invalid state is used (3% for total income below \$15,000; 2% for total income of \$15,000 or more). If the allowance is a negative amount, it's set to zero.

- **Father's and mother's Social Security tax allowance.** The father's and mother's Social Security taxes are calculated separately by applying the tax rates shown in Table A2 to the father's income earned from work and the mother's income earned from work in 2004 (as reported on the FAFSA). The total allowance for Social Security taxes is never less than zero.
- **Income protection allowance.** Use Table A3. This allowance is for the basic living expenses of a family. It varies according to the number in the parents' household and the number in college in 2005-2006, as reported on the FAFSA. In general, a school can assume that 30% of the income protection allowance amount is for food, 22% for housing, 9% for transportation expenses, 16% for clothing and personal care, 11% for medical care, and 12% for other family consumption. The income protection allowance used for a particular student is provided as one of the intermediate values in the FAA Information Section of the output document (labeled as "IPA").
- **Employment expense allowance.** Families with two working parents and one-parent families have extra expenses that must be considered, such as housekeeping services, transportation, clothing and upkeep, and meals away from home. This allowance recognizes those extra expenses. For two working parents, the allowance is 35% of the lesser of the father's income earned from work (question 76) or the mother's income earned from work (question 77), but may not exceed \$3000. For one-parent families, the allowance is 35% of the parent's income earned from work, also not to exceed \$3000. If a student's parents are married and only one parent reports an income earned from work, the allowance is zero. The employment expense allowance is never less than zero.

▼ *Parents' contribution from assets.* In the full formula, the assets of parents of a dependent student are considered in order to fully measure the family's ability to help pay college costs. The formula evaluates the family's assets and determines a "contribution from assets," an amount that is combined with available income to give an accurate picture of the family's financial strength. In the simplified formula assets aren't counted.

First, the parents' **net worth** is calculated by adding assets reported on the FAFSA. The net worth of a business or a farm is adjusted to protect a portion of the net worth of these assets. Use Table A4 to calculate the amount to be used.

Second, the parents' **discretionary net worth** is calculated by subtracting the education savings and asset protection allowance (Table A5) from the parents' net worth. As is the case with income, this is done to protect a portion of assets. The allowances for ages 40 through 65 approximate the present cost of an annuity which, when combined with Social Security benefits, would provide at age 65 a moderate level of living for a retired couple or single person. As shown in Table A5, the allowance increases with the age of the older parent (as reported on the FAFSA) to indicate the cost of purchasing such an annuity at a given age. Discretionary net worth may be less than zero.

Finally, the discretionary net worth is multiplied by the conversion rate of 12% to obtain the **parents' contribution from assets**, which represents the portion of parental assets considered available to help pay for the student's postsecondary education. If the contribution from assets is less than zero, it is set to zero.

▼ *Calculation of parents' contribution.* This is the final step in determining the parents' contribution. The parents' available income and contribution from assets are added together to determine the parents' adjusted available income, which can be a negative number. The total parents' contribution from adjusted available income is calculated from the amounts and rates in Table A6 and is the total amount parents are expected to contribute toward all of their family's postsecondary educational costs. The rates in Table A6 increase from 22% to 47% as the adjusted available income increases. This is based on the principle that as income increases beyond the amount needed to maintain a basic standard of living, the portion used for family maintenance decreases and the portion available for discretionary purposes increases. Therefore, a progressively larger amount of income may be contributed toward postsecondary educational costs.

The parents' contribution for the individual student is calculated by dividing the total parents' contribution from adjusted available income by the number in college in 2005-2006, as reported on the FAFSA. Parents are not included in the number attending college.

Student's contribution from income

To determine the student's contribution from income, the student's available income (AI) is first calculated by subtracting total allowances from the student's total income. The AI is then assessed at a rate of 50% to obtain the student contribution from available income. If the student contribution from available income is less than zero, it's set to zero.

▼ *Student's available income.* The available income is the student's total income minus total allowances. As with the parents' income information, the student's total income is calculated using information

from the student's FAFSA. The student's total income is the sum of the student's taxable and untaxed income, minus amounts reported in the income but excluded from the formula (see chapter 2 for more on these exclusions). If the student is a tax filer, the student's AGI as reported on the FAFSA is the amount of taxable income used in the calculation. If the student is not a tax filer, the calculation uses the student's reported income earned from work. Total income may be a negative number.

The allowances are calculated by adding the following:

- **U.S. income tax paid.** Use the amount reported on the FAFSA. Non-tax filers don't receive this allowance. If this is a negative amount, it's set to zero.
- **State and other tax allowance.** Use Table A7. This allowance is a percentage of the student's total income. The percentage varies according to the state. The state to be used is the student's state of legal residence reported on the FAFSA. If that item is blank or invalid, the state in the student's mailing address is used. If both items are blank or invalid, the parents' state of legal residence is used. If all three items are blank or invalid, the rate for a blank or invalid state in Table A7 is used (2%). If the allowance is a negative amount, it's set to zero.
- **Social Security tax allowance.** The student's Social Security taxes are calculated by applying the tax rates shown in Table A2 to the student's income earned from work in 2004 (as reported on the FAFSA). The total allowance for Social Security taxes is never less than zero.
- **Income protection allowance.** The income protection allowance for a dependent student is \$2,440.
- **Parent's negative AAI.** To recognize that a student's income may be needed to help support the family, the EFC calculation allows a parent's negative adjusted available income (AAI) to reduce a dependent student's contribution from income. Because the student's contribution from income cannot be negative, this will not affect the student's contribution from assets.

Student's contribution from assets

The student's assets are treated the same way as the parents' assets with three differences: there is no adjustment to the net worth of a business or farm, there is no education savings and asset protection allowance, and net worth is assessed at the rate of 35%. Remember that under the simplified formula there is no student contribution from assets.

The student's net worth is calculated by adding assets reported on the FAFSA (negative amounts are converted to zero for this calculation). Then, the student's net worth is multiplied by the conversion rate of 35% to obtain the student's contribution from

assets, which represents the portion of the value of student's assets that may be considered available to help pay for the student's postsecondary education.

Alternate EFCs for other than 9-month enrollment

The standard parents' contribution is for a 9-month enrollment period. For an enrollment of less than 9 months, the parents' contribution is prorated according to the number of months of enrollment. The student's contribution from available income is also prorated and then added to the student asset contribution, which is not prorated. For an enrollment of more than 9 months, the parents' contribution is calculated by adjusting the standard 9-month formula on page 3 of Worksheet A of the EFC worksheets, and the student's contribution remains at the 9-month amount.

Formula for independent students without dependents other than a spouse

- Contribution from available income
- Contribution from assets

FORMULA B — INDEPENDENT STUDENT WITHOUT DEPENDENTS OTHER THAN A SPOUSE

The EFC for an independent student without dependents other than a spouse is calculated using the FAFSA information for the student and spouse. The CPS calculates a contribution from available income and a contribution from assets. The sum of these two is divided by the number in college in 2005-2006, as reported on the FAFSA. The result is the EFC for the 2005-2006 award period. Under the simplified formula, the contribution from assets isn't used.

Worksheets and tables that can be used to calculate the EFC for an independent student without dependents other than a spouse are given at the end of this chapter. For those items that are taken from the FAFSA, the worksheets indicate the corresponding FAFSA/SAR line numbers. On the worksheets for the simplified formula, the parts of the calculation that aren't used are grayed out.

Contribution from available income

To determine the student's contribution from available income, the student's available income is first calculated by subtracting total allowances from the student's total income. The allowances account for certain nondiscretionary expenses, such as taxes and basic living expenses. Once a minimum level of support has been provided for those expenses, the formula assumes that the remaining income is available for discretionary purposes, including paying for a postsecondary education. The available income can be a negative number. The available income is then assessed at a rate of 50% to obtain the student's contribution from available income.

▼ **Total income.** The total income is the sum of the student's and her spouse's (if the student is married) taxable and untaxed income, minus amounts reported in the income on the FAFSA but excluded from the formula (see chapter 2 for more on these exclusions). If the student and spouse are tax filers, their AGI as reported on the FAFSA is the amount of taxable income used in the calculation. If the student and spouse are not tax filers, the calculation uses reported income earned from work. Untaxed income is included in the formula

because it may have a considerable effect on the family's financial strength and, in some cases, may be the family's main source of income. Note that "earned income credit" is included as part of total untaxed income and benefits only if the student or spouse are taxfilers. Total income can be a negative number.

▼ *Allowances against income.* Total allowances are calculated by adding the following:

- **U.S. income tax paid.** Use the amount reported on the FAFSA. Non-taxfilers don't receive this allowance. If this is a negative amount, it's set to zero.
- **State and other tax allowance.** Use Table B1. This allowance is a percentage of the student and spouse's total income. The percentage varies according to the state. The state to be used is the student's state of legal residence reported on the FAFSA. If that item is blank or invalid, the state in the student's mailing address is used. If both items are blank or invalid, the rate for a blank or invalid state is used (2%). If the allowance is a negative amount, it's set to zero.
- **Social Security tax allowance.** The student and spouse's Social Security taxes are calculated separately by applying the tax rates shown in Table B2 to the student's income earned from work in 2004 and the spouse's income earned from work in 2004 (as reported on the FAFSA). The total allowance for Social Security taxes is never less than zero.
- **Income protection allowance.** The income protection allowance for an unmarried student is \$5,560. For a married student, the income protection allowance is \$5,560 if the student's spouse is enrolled at least half time and \$8,890 if the student's spouse isn't enrolled at least half time.
- **Employment expense allowance.** Families with two working spouses have extra expenses that must be considered, such as housekeeping services, transportation, clothing and upkeep, and meals away from home. This allowance recognizes those extra expenses. If the student isn't married, the employment expense allowance is zero. If the student is married but only one person is working (either the student or the student's spouse), the allowance is zero. If both the student and his spouse are working, the allowance is 35% of the lesser of the student's income earned from work (question 38) or the spouse's income earned from work (question 39), but may not exceed \$3,000.

Contribution from assets

For students who qualify for the simplified formula, there is no contribution from assets. In the full formula, the assets of an independent student with no dependents other than a spouse are

considered in order to fully measure the family's ability to contribute toward postsecondary educational costs.

First, the **net worth** of the student and spouse's assets is calculated by adding assets reported on the FAFSA. The net worth of a business or a farm is adjusted to protect a portion of the net worth of these assets. Use Table B3 to calculate the amount to be used.

Second, the student and spouse's **discretionary net worth** is calculated by subtracting the asset protection allowance (Table B4) from the net worth. The allowance increases with the age of the student as of December 31, 2005, which may be determined from the student's date of birth as reported on the FAFSA. This is done to protect a portion of assets that may be needed for purposes other than education, such as emergencies or retirement. Discretionary net worth can be less than zero.

Finally, the discretionary net worth is multiplied by the conversion rate of 35% to obtain the student and spouse's contribution from assets, which represents the portion of the value of the assets that is considered available to help pay for the student's college education. If the contribution from assets is less than zero, it's set to zero.

Alternate EFCs for other than nine-month enrollment

The standard EFC is for a nine-month enrollment period. If the student will be enrolled for less than nine months, the EFC is simply prorated by dividing it by nine and then multiplying the result by the number of months the student will be enrolled. For an enrollment of more than nine months, however, the EFC remains at the nine-month amount.

FORMULA C — INDEPENDENT STUDENT WITH DEPENDENTS OTHER THAN A SPOUSE

The EFC for an independent student with dependents other than a spouse is calculated using the information for the student and spouse provided on the FAFSA. The formula is almost the same as the formula for the parents of a dependent student. There are three basic steps. First, the student's available income is determined. Then, the student's contribution from assets is calculated. Finally, the EFC is calculated using the available income, the contribution from assets, and the number in college.

Worksheets and tables that can be used to calculate the EFC for an independent student with dependents other than a spouse are given at the end of this chapter. For those items that are taken from the FAFSA, the worksheets indicate the corresponding FAFSA/SAR line numbers. On the worksheets for the simplified formula, the parts of the calculation that aren't used are grayed out.

Formula for independent student with dependents other than a spouse

- Available income
- Contribution from Assets
- Calculation of the student's EFC

Available income

Available income is calculated by subtracting certain allowances from the student's total income. These allowances account for certain nondiscretionary expenses, such as taxes and basic living expenses. Once a minimum level of support has been provided for those expenses, the formula assumes that the remaining income is available for discretionary purposes, including paying for a postsecondary education. The available income can be a negative number.

▼ *Student's total income.* The student's total income is the sum of the student's and his or her spouse's (if the student is married) taxable and untaxed income, minus amounts reported in the income on the FAFSA but excluded from the formula (see chapter 2 for more information on these exclusions). If the student and spouse are taxfilers, AGI as reported on the FAFSA is the amount of taxable income used in the calculation. If the student and spouse are not taxfilers, the calculation uses reported income earned from work. Note that "earned income credit" is included as part of total untaxed income and benefits only if the student and spouse are taxfilers. Total income can be a negative number.

▼ *Allowances against income.* Total allowances are calculated by adding the following:

- **U.S. income tax paid.** Use the amount reported on the FAFSA. Non-taxfilers don't receive this allowance. If this is a negative amount, it is set to zero.
- **State and other tax allowance.** Use Table C1. This allowance is a percentage of the total income and approximates the average amount paid in state and other taxes. The percentage varies according to the state and according to whether the total income is below \$15,000 or is \$15,000 or more. The state to be used is the student's state of legal residence reported on the FAFSA. If this item is blank or invalid, the state in the student's mailing address is used. If both items are blank or invalid, the rate for a blank or invalid state is used (3% for total income below \$15,000; 2% for total income of \$15,000 or more). If the allowance is a negative amount, it's set to zero.
- **Social Security tax allowance.** The student's and spouse's Social Security taxes are calculated separately by applying the tax rates shown in Table C2 to the student's income earned from work and the spouse's income earned from work in 2004 (as reported on the FAFSA). The total allowance for Social Security taxes is never less than zero.
- **Income protection allowance.** Use Table C3. This allowance provides for the basic living expenses of a family. It varies according to the number in the student's household and the number in college in 2005-2006, as reported on the FAFSA. In general, a school can assume that 30% of the income protection allowance amount is for food, 22% for housing, 9% for

transportation expenses, 16% for clothing and personal care, 11% for medical care, and 12% for other family consumption. The income protection allowance used for a particular student is provided as one of the intermediate values in the FAA Information Section of the output document (labeled as “IPA”).

- **Employment expense allowance.** Families with two working parents and one-parent families have extra expenses that must be considered, such as housekeeping services, transportation, clothing and upkeep, and meals away from home. This allowance recognizes those extra expenses. When both the student and spouse work, the allowance is 35% of the lesser of the student’s income earned from work (question 38) or the spouse’s income earned from work (question 39), but may not exceed \$3,000. If the student isn’t married, the allowance is 35% of the student’s income earned from work, or \$3,000, whichever is less. If a student is married and only the student *or* the spouse (but not both) reports an income earned from work, the allowance is zero. The employment expense allowance is never less than zero.

Contribution from assets

In the full formula, the assets of an independent student with dependents other than a spouse are considered in order to fully measure the family’s ability to contribute toward postsecondary educational costs. The formula determines a “contribution from assets,” an amount that is combined with available income to give an accurate picture of the family’s financial strengths. In the simplified formula, the assets aren’t counted at all.

First, the **net worth** of a student and spouse’s assets is calculated by adding assets reported on the FAFSA. The net worth of a business or farm is adjusted to protect a portion of these assets. Use Table C4 to calculate the amount to be used.

Second, the student and spouse’s **discretionary net worth** is calculated by subtracting the asset protection allowance (Table C5) from the net worth. The allowance increases with the age of the student as of December 31, 2005, which may be determined from the student’s date of birth as reported on the FAFSA. This is done to protect a portion of assets that may be needed for purposes other than education, such as emergencies or retirement. Discretionary net worth can be less than zero.

Finally, the discretionary net worth is multiplied by the conversion rate of 12% to obtain the **contribution from assets**, which represents the portion of the value of the student and spouse’s assets that may be considered to be available to help pay for the student’s postsecondary education. If the contribution from assets is less than zero, it is set to zero.

Calculation of student's EFC

This is the final step in determining the EFC for the independent student with dependents other than a spouse. The available income and the contribution from assets are added together to obtain the adjusted available income. The adjusted available income can be a negative number. The total contribution from adjusted available income is calculated from using Table C6. This is the total amount the student's family is expected to contribute toward family postsecondary educational costs. The rates in Table C6 increase from 22% to 47% as the adjusted available income increases. The rate is based on the principle that as income increases beyond the amount needed to maintain a basic standard of living, the portion used for family maintenance decreases, while the portion available for discretionary purposes increases. The larger the income, the easier it is for a family to contribute toward postsecondary educational costs with less effect on the maintenance of the family.

The EFC is calculated by dividing the total student's contribution from adjusted available income by the number in college in 2005-2006, as reported on the FAFSA. The result is the EFC for the 2005-2006 award period.

Alternate EFCs for other than nine-month enrollment

The standard EFC is for a nine-month enrollment period. If the student will be enrolled for less than nine months, the EFC is simply prorated by dividing it by nine and then multiplying the result by the number of months the student will be enrolled. For an enrollment of more than nine months, however, the EFC remains at the nine-month amount.

Mississippi	3%	2%	State	3%	2%
			OTHER	3%	2%

Multiply Parents' Total Income (EFC Formula Worksheet A, line 7) by the appropriate rate from the table above to get the "State and Other Tax Allowance" (EFC Formula Worksheet A, line 9). Use the parents' State of Legal Residence (FAFSA/SAR #67). If this item is blank or invalid, use the student's State of Legal Residence (FAFSA/SAR #18). If both items are blank or invalid, use the State in the Student's Mailing Address (FAFSA/SAR #6). If all three items are blank or invalid, use the rate for a blank or invalid state above.

Table A2: Social Security Tax

Calculate separately the Social Security tax of father, mother, and student.

Income Earned from Work*	Social Security Tax
\$0 - \$87,900	7.65% of income
\$87,901 or greater	\$6,724.35 + 1.45% of amount over \$87,900

*Father's/stepfather's 2004 income earned from work is FAFSA/SAR #76.
 Mother's/stepmother's 2004 income earned from work is FAFSA/SAR #77.
 Student's 2004 income earned from work is FAFSA/SAR #38.
 Social Security tax will never be less than zero.

Table A3: Income Protection Allowance

Number in parents' household, including student (FAFSA/SAR #65)	Number of college students in household (FAFSA/SAR #66)				
	1	2	3	4	5
2	\$13,870	\$11,490	————	————	————
3	17,270	14,910	\$12,530	————	————
4	21,330	18,950	16,590	\$14,220	————
5	25,160	22,790	20,430	18,060	\$15,700
6	29,430	27,060	24,700	22,330	19,970

Note: For each additional family member, add \$3,320.
 For each additional college student (except parents), subtract \$2,360.

Table A4: Business/Farm Net Worth Adjustment

for EFC Formula Worksheet A (parents only)

If the net worth of a business or farm is—	Then the adjusted net worth is—			
Less than \$1	\$0			
\$1 to \$100,000	40% of net worth of business/farm			
\$100,001 to \$295,000	\$ 40,000	+	50%	of net worth over \$100,000
\$295,001 to \$495,000	\$137,500	+	60%	of net worth over \$295,000
\$495,001 or more	\$257,500	+	100%	of net worth over \$495,000

Table A5: Education Savings and Asset Protection Allowance
for EFC Formula Worksheet A (parents only)

<i>Age of older parent as of 12/31/2005*</i>	Allowance if there are two parents	Allowance if there is only one parent	<i>Age of older parent as of 12/31/2005*</i>	Allowance if there are two parents	Allowance if there is only one parent
25 or less..	0	0	45	37,700	14,800
26	2,200	900	46	38,600	15,200

Multiply the student's total income (EFC Formula Worksheet A, line 35) by the appropriate rate from the table above to get the "state and other tax allowance" (EFC Formula Worksheet A, line 37). Use the student's *state of legal residence* (FAFSA/SAR #18). If this item is blank or invalid, use the *state* in the student's mailing address (FAFSA/SAR #6). If both items are blank or invalid, use the parents' *state of legal residence* (FAFSA/SAR #67). If all three items are blank or invalid, use the rate for a blank or invalid state above.

Multiply the total income of student and spouse (EFC Formula Worksheet B, line 7) by the appropriate rate from the table above to get the “state and other tax allowance” (EFC Formula Worksheet B, line 9). Use the student’s State of Legal Residence (FAFSA/SAR #18) reported on the FAFSA. If this item is blank or invalid, use the State in the Student’s Mailing Address (FAFSA/SAR #6). If both items are blank or invalid, use rate for blank or invalid state above.

Table B2: Social Security Tax

Calculate separately the Social Security tax of student and spouse.

Income Earned from Work*	Social Security Tax
\$0 - \$87,900	7.65% of income
\$87,901 or greater	\$6,724.35 + 1.45% of amount over \$87,900

*Student's 2004 income earned from work is FAFSA/SAR #38.

Spouse's 2004 income earned from work is FAFSA/SAR #39.

Social Security tax will never be less than zero.

Table B3: Business/Farm Net Worth Adjustment

If the net worth of a business or farm is—	Then the adjusted net worth is—
Less than \$1	\$0
\$1 to \$100,000	40% of net worth of business/farm
\$100,001 to \$295,000	\$ 40,000 + 50% of net worth over \$100,000
\$295,001 to \$495,000	\$137,500 + 60% of net worth over \$295,000
\$495,001 or more	\$257,500 + 100% of net worth over \$495,000

	1	2	3	4	5
2	\$13,870	\$11,490	—	—	—
3	17,270	14,910	\$12,530	—	—
4	21,330	18,950	16,590	\$14,220	—
5	25,160	22,790	20,430	18,060	\$15,700
6	29,430	27,060	24,700	22,330	19,970

Note: For each additional family member, add \$3,320.
For each additional college student, subtract \$2,360.

Table C4: Business/Farm Net Worth Adjustment**If the net worth of a business or farm is—****Then the adjusted net worth is—**

Less than \$1

\$0

\$1 to \$100,000

40% of net worth of business/farm

\$100,001 to \$295,000

\$ 40,000 + 50% of net worth over \$100,000

\$295,001 to \$495,000

\$137,500 + 60% of net worth over \$295,000

\$495,001 or more

\$257,500 + 100% of net worth over \$495,000

Table C5: Asset Protection Allowance

Age of student as of 12/31/05*	Allowance for—		Age of student as of 12/31/05*	Allowance for—	
	Married Student	Unmarried Student		Married Student	Unmarried Student
25 or less..	0	0	45	37,700	14,800
26	2,200	900	46	38,600	15,200
27	4,400	1,800	47	39,600	15,500
28	6,700	2,700	48	40,500	15,900
29	8,900	3,500	49	41,500	16,200
30	11,100	4,400	50	42,800	16,600
31	13,300	5,300	51	43,900	17,000
32	15,500	6,200	52	44,900	17,400
33	17,800	7,100	53	46,300	17,800
34	20,000	8,000	54	47,400	18,300
35	22,200	8,900	55	48,900	18,700
36	24,400	9,800	56	50,000	19,100
37	26,600	10,600	57	51,500	19,700
38	28,900	11,500	58	53,100	20,100
39	31,100	12,400	59	54,600	20,700
40	33,300	13,300	60	56,200	21,200
41	34,100	13,600	61	57,800	21,800
42	35,000	13,900	62	59,500	22,400
43	35,900	14,200	63	61,500	23,000
44	36,700	14,500	64	63,300	23,700
			65 or over ..	65,400	24,300

*Determine student's age as of 12/31/05 from student's date of birth (FAFSA/SAR #9)

Table C6: Contribution from AAI

If student's AAI is—			The student's contribution from AAI is—		
Less than -\$3,409			-\$750		
-\$3,409	to	\$12,400	22% of AAI		
\$12,401	to	\$15,600	\$2,728	+	25% of AAI over \$12,400
\$15,601	to	\$18,700	\$3,528	+	29% of AAI over \$15,600
\$18,701	to	\$21,900	\$4,427	+	34% of AAI over \$18,700
\$21,901	to	\$25,000	\$5,515	+	40% of AAI over \$21,900
\$25,001	or more		\$6,755	+	47% of AAI over \$25,000
